

Looking north, one sees Lake, mountains, snow, glaciers, forests, and beaches.

With a deafening din, a hailstorm pummels the Lake.

Cumulonimbus mammatus hangs over the Lake during a summer thunderstorm.

Frost flowers grow on the beach in the late winter.

A steam devil travels across the Lake midwinter.

A semi-circular rainbow is completed by reflections in the calm waters of the Lake.

A snowflake's view of where it will come to rest.

An iridescent wave cloud hangs over the Lake in the summer.

The local weather contains many components, one of which is wildfires.

There are undulations in the atmosphere instigated by flow over mountains. While these waves are often inconspicuous, smoke from a distant wildfire reveals them.

This phenomenon carries the deceptive name of a smoking mountain. It is actually cloud formed downwind of the mountain by air being drawn up the lee slope.

Cumulus clouds transport significant energy from the surface to the atmosphere.

Just earth, air and water.
